PROJECT IDEA

The main idea of the application is about helping the tourists to search for recommendations based on location, category, and popularity, or simply browse through the latest posts from local experts. Each recommendation includes photos, descriptions, and insider tips from the person who posted it, helping tourists to get a sense of what to expect and how to make the most of their visit.

BY LOCALS ALULA

PROBLEM DEFINITION

Tourism is a rapidly growing sector in Saudi Arabia, and it's a key part of the Saudi vision 2030. However, many people are unaware of the amazing new places and tourist sites that have appeared. There's also a lack of suitable platforms for people to share and post about these places and reach a larger audience.

BY LOCALS ALULA

PROPOSED SOLUTION

Our application helps tourists explore the captivating tourist destination of AlUla in Saudi Arabia, with an easy-to-use interface and a comprehensive database of attractions. Tourists can search for recommendations based on location, category, and popularity, or browse through the latest posts from local experts. Each recommendation includes photos, descriptions, and insider tips to help tourists make the most of their visit.

BY LOCALS ALULA

SCOPE

The scope of our application is to provide visitors with personalized recommendations to the city's tourist attractions.

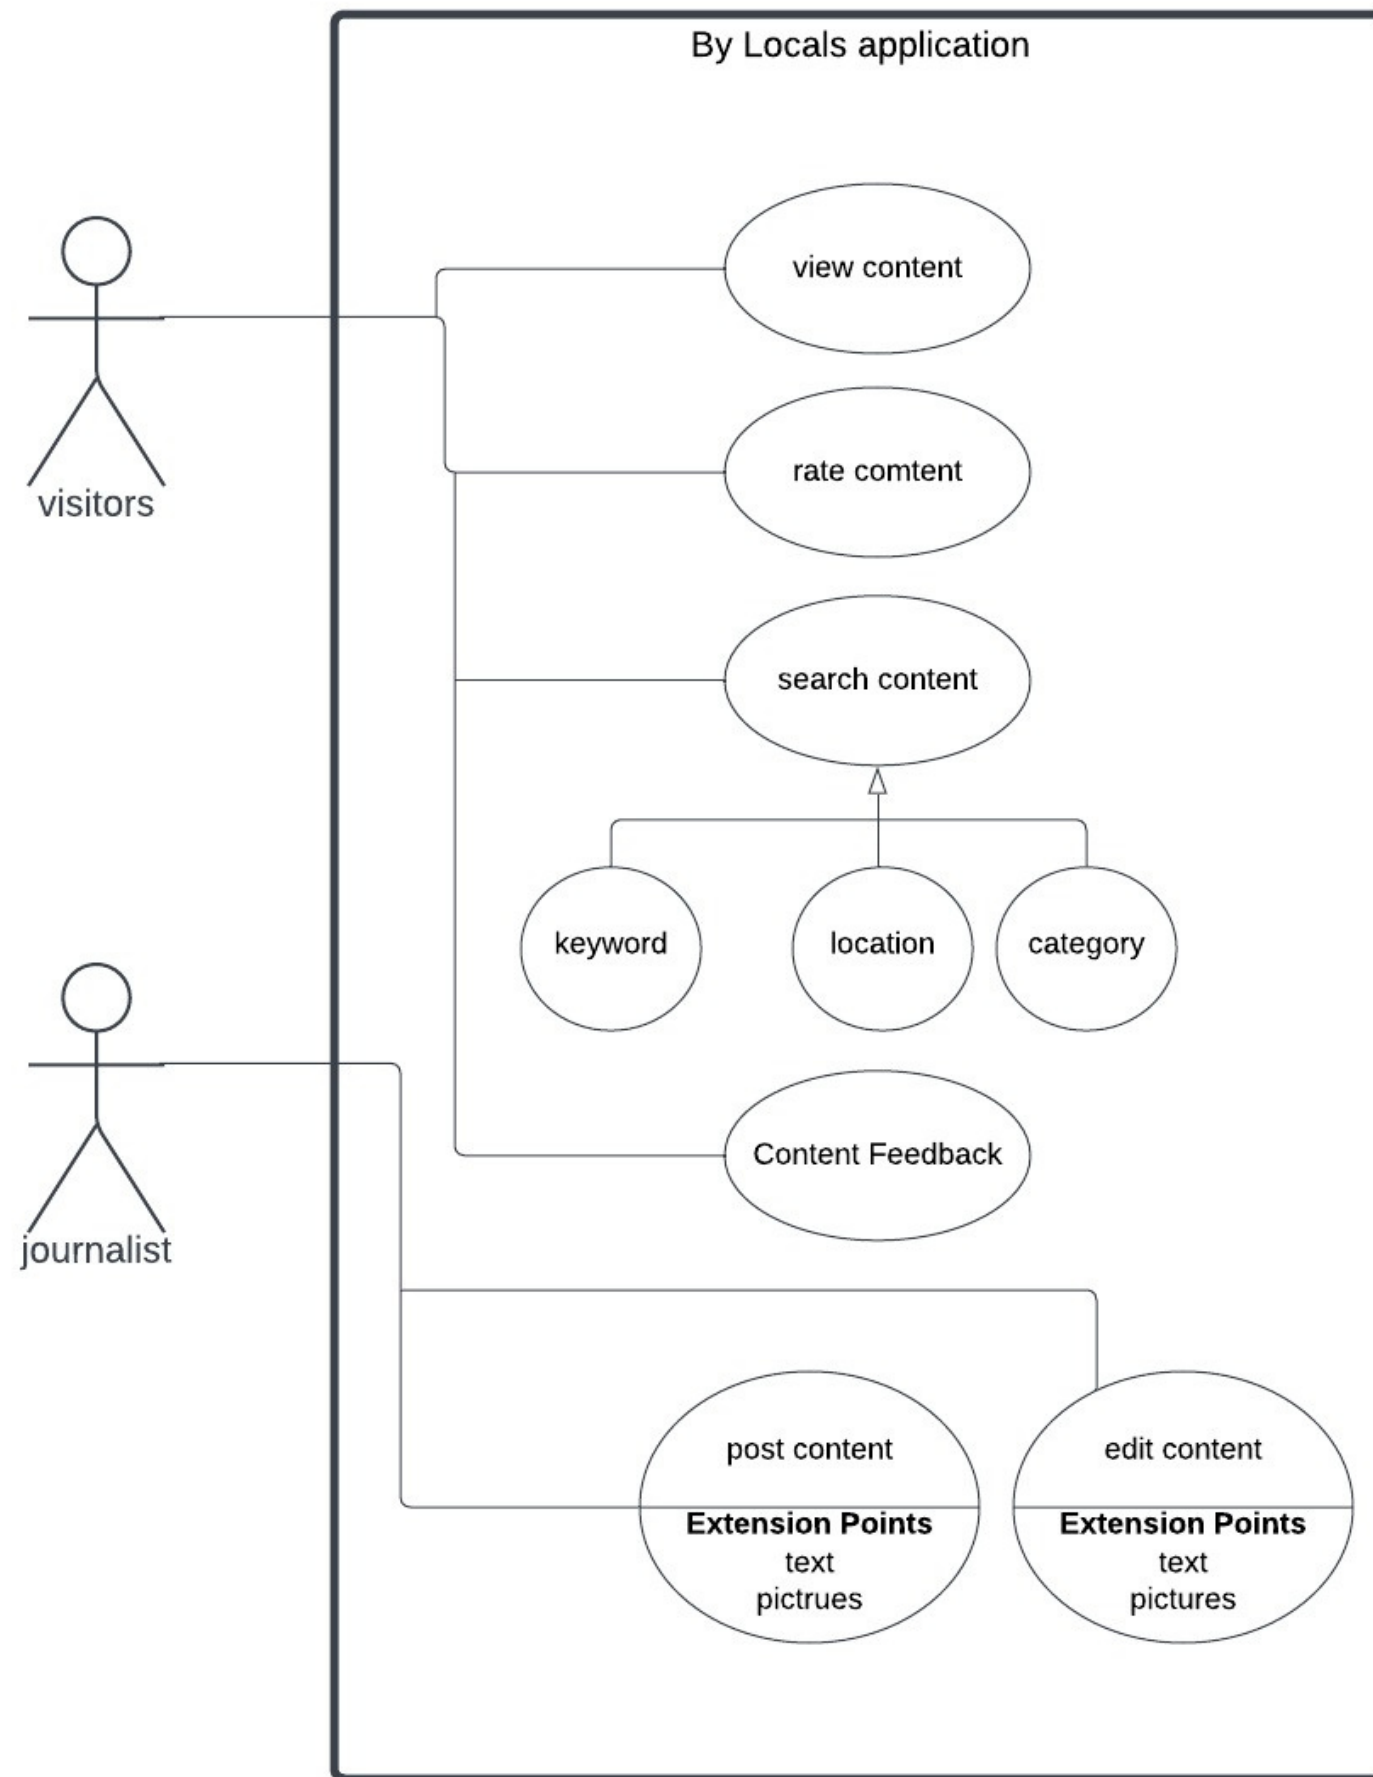

USERS

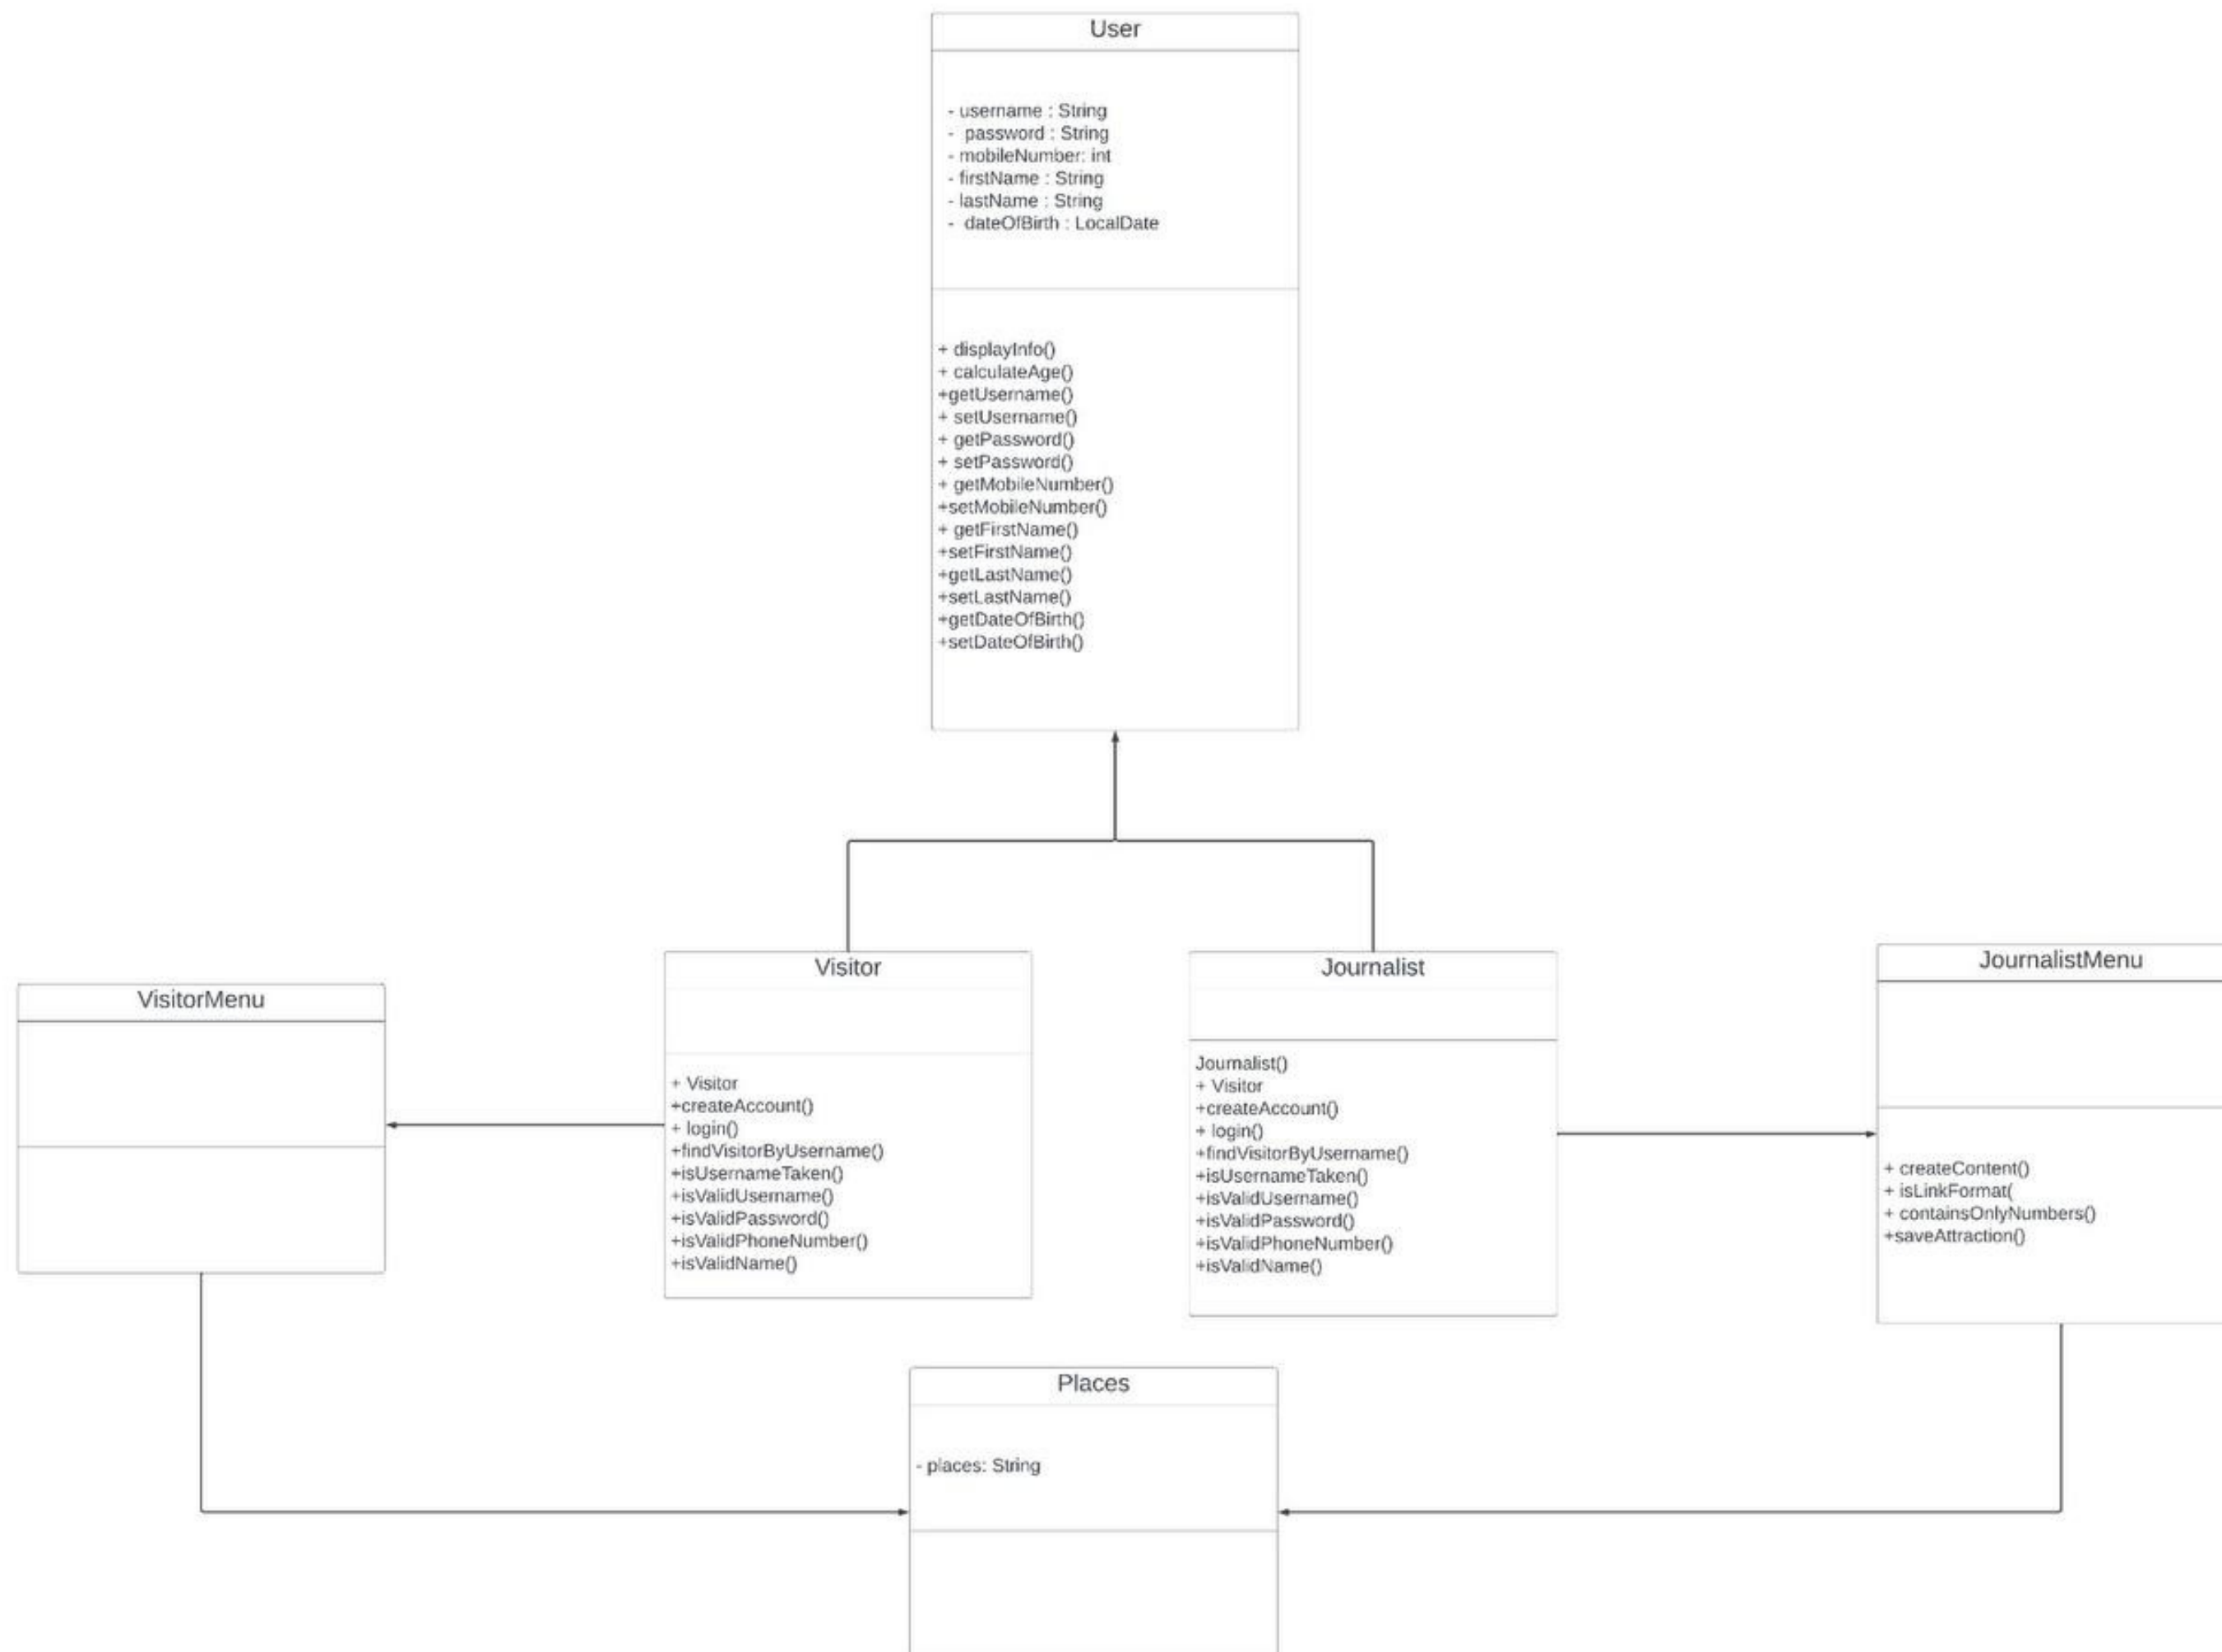

- **Journalists : provide descriptions and pictures of tourist attractions and encourage people to visit them.**
- **Visitors : browse through recommendations, view pictures**

USE CASE DIAGRAM

BY LOCALS ALULA

CLASS DIAGRAM

BY LOCALS ALULA

SPRINT#1

Search Content:
Visitors should be able to search for
attractions
by keyword, location, or category

SPRINT#2

Create Content:
Journalist must be able to create
descriptions
including text and pictures for the
platform

SPRINT#3

User Authentication:

**Visitors and Journalists must be able to
create accounts and log in to access the
.platform's features**

LESSONS LEARNED

We benefited a lot from working on this project, the steps and details weren't clear at first, but when we started working step by step it became easier, clearer and less complicated, starting from square one and doing the right actions including collecting data, analyzing it and using some UML diagrams to organize ideas and define outline it.

The Methodology

Scrum

We chose Scrum, an agile methodology
Because it provides a flexible and
adaptable

It allow teams to work collaborative and
iteratively to deliver high quality
software quickly

TOOLS USED

- **Github.**

CONCLUSION

We faced challenges with time management, online organization, and changing requirements while developing our application. However, we learned a lot through the process, starting with data gathering and using UML diagrams to organize our ideas. As we progressed, the application's details became clearer, and we became more efficient in our work.
